

The vent panels are designed to open at a predetermined pressure to release the explosion overpressure to a safe area and without fragment emission, thus preventing the design strength of the vessel from being exceeded design strength of the vessel.

BRP, BCP, and BTP flat vent panels are suitable for atmospheric applications operating with no vacuum or very low vacuum and no pulsing pressures, such as silos with mechanical filling or bucket elevators.

Flat Explosion Vent panels BRP, BCP, BTP

Technical features

- For organic and metal dusts up to St3 and gas group IIA
- Dimensions from 150 to 2000 mm
- Pstat at 20°C: 20 to 500 mbarg \pm 15%
- Working pressure: 50% Pstat
- Max. vacuum resistance: -40 mbar
- Standar working temperature: -20° to 90°C
- Material: AISI 304L o AISI 316L
- ATEX Certificate: LOM18ATEX1021X

Technical features

- For organic and metal dust up to St2
- Pstat at 20°C: 20 to 500 mbarg \pm 15%
- Working pressure: 50% Pstat
- Max. vacuum resistance: -40 mbar
- Standar working temperature: -20°C a +90°C
- Material: AISI 304L o AISI 316L
- ATEX Certificate: LOM18ATEX1021X

Technical features

- For organic and metal dust up to St1
- Pstat at 20°C: 20 to 100 mbarg \pm 15%
- Working pressure: 40% Pstat
- Max. vacuum resistance: -20°C a +90°C
- Material: AISI 304L o AISI 316L
- ATEX Certificate: LOM18ATEX1021X

Test according to EN14797 and EN10204 standars.
For other sizes and/or working conditions, please contact Adix.

The vent panels are designed to open at a predetermined pressure to release the explosion overpressure to a safe area without the release of fragments, thus preventing it from exceeding the design strength of the vessel.

Single-layer domed vents (BRD and BCD) are suitable for vacuum and pulsating pressure applications such as pneumatically filled silos, suction filters, or cyclones.

Domed Explosion Vent Panels BRD, BCD

Technical features

- For organic and metal dusts up to St3 and gas group IIA
- Pstat at 20°C: 20 to 500 mbarg ±15%
- Working pressure: 70% Pstat
- Max. vacuum resistance: -300 mbar
- Standar working temperature: -20° to 90°C
- Material: AISI 304L o AISI 316L
- ATEX Certificate: LOM18ATEX1021X

INERIS

The vent panels are designed to open at a predetermined pressure to release the explosion overpressure to a safe area without the release of fragments, thus preventing the design strength of the vessel from being exceeded.

BRS folded vent panels are suitable for low vacuum and pulsating pressure applications such as pneumatically filled silos, suction filters, or cyclones.

Flat Explosion Vent Panel BRS

Technical features

- For organic and metal dust up to St3
- Pstat at 20°C: 20 to 500 mbarg ±15%
- Working pressure: 50% Pstat
- Standar working temperature.: -20° to 90°C
- Max. vacuum resistance: -100 mbar
- Material: AISI 304L o AISI 316L
- ATEX Certificate: LOM18ATEX1021X/ 1

BRS- RECTANGULAR	TYPE	MEASUREMENTS (MM) LENGHT X WIDTH	AV (M2)
	BRS670X570	350X200	0,289
BRS880X530	880X530	0,360	
BRS1000X666	1000X666	0,539	
BRS1000X1000	1000X1000	0,846	

Test according to EN14797 and EN10204 standars.
For other sizes and/or working conditions, please contact Adix.

INERIS

The vent panels are designed to open at a predetermined pressure to release the explosion overpressure to a safe, non-fragmenting area, thus preventing the design strength of the vessel from being exceeded.

BRH vent panels are designed for installation on external walls of battery rooms to relieve overpressure caused by explosions due to the release of hydrogen gas.

Flat Explosion Vent panel BRH

Technical features

- For organic and metal dust up to St3
- Pstat at 20°C: 20 to 500 mbarg ±15%
- Working pressure: 50% Pstat
- Standar working temperature: -20° to 90°C
- Resistencia máx. vacío: -100 mbar
- Material: AISI 304L o AISI 316L
- ATEX Certificate: LOM18ATEX1021X/ 1

BRS- RECTANGULAR	TYPE	MEASUREMENTS (MM) LENGHT X WIDTH	AV (M2)
	BRH670X570	350X200	0,289
	BRH880X530	880X530	0,360
	BRH1000X666	1000X666	0,539
	BRH1000X1000	1000X1000	0,846

Test according to EN14797 and EN10204 standars.
For other sizes and/or working conditions, please contact Adix.

The vent panels are designed to open at a predetermined pressure to release the explosion overpressure to a safe zone without emission of fragments, thus preventing it from exceeding the design resistance of the container

Double-layer domed vents (BRDM) are suitable for vacuum pressure applications such as suction filters, or cyclones.

Domed Explosion Vent Panels BRDM, BDC

TECHNICAL FEATURES

- For organic and metallic dust St3
- Pstat a 20°: 40 to 500 mbarg ±15%
- **Working Pressure:** 70% Pstat
- **Max resistance empty:** -1000 mbar
- **Standar Working Temp.:** -20° to 90°C
- **Material:** AISI 304L o AISI 316L
- **ATEX Certificate:** LOM18ATEX1021X
